

PREVENTING DRIVEWAY RUNOVERS

Ten things to think about

5 children are killed each year

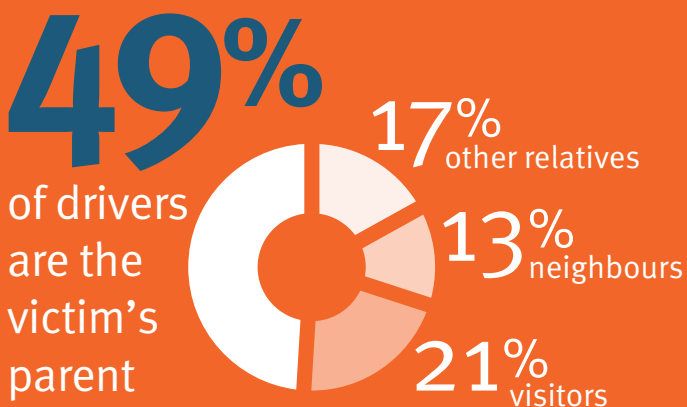

more than **20** hospitalised a year.

20

(One child admitted to Starship Hospital a fortnight)

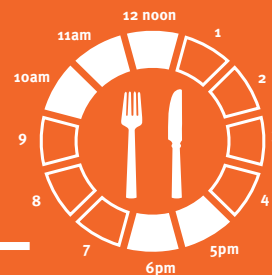

66% of children **0-2 years old** run over

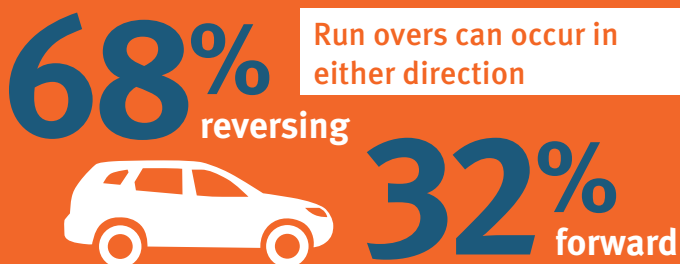

REVERSING CAMERAS aid parking but **don't always prevent driveway run overs**

DANGER TIMES ARE before lunch and dinner

SPRING AND SUMMER are danger months with kids outside and house doors left open

- CONTRIBUTING FACTORS:**
- Human Factor:** small children and drivers
 - Vehicle Design:** all have blind zones front, side and rear
 - Built Environment:** long or shared driveways and lack of separate pedestrian access increases risks

CHECK FOR ME BEFORE YOU TURN THE KEY

Before you get in, always walk around the car and **check for children**.

Separate play areas from driveways with fencing and gates.

Supervise children whenever cars are moving.
